Recap on Strassen Algorithm, to calculate matrix multiplication $M \times N$, we first split the matrices into:

$$M = \begin{pmatrix} A & B \\ C & D \end{pmatrix}, \qquad N = \begin{pmatrix} E & F \\ G & H \end{pmatrix}.$$

Then, we calculate the intermediate matrices:

$$S_1 = (B - D)(G + H)$$

$$S_2 = (A + D)(E + H)$$

$$S_3 = (A - C)(E + F)$$

$$S_4 = (A + B)H$$

$$S_5 = A(F - H)$$

$$S_6 = D(G - E)$$

$$S_7 = (C + D)E$$

Strassen Algorithm in a divide-and-conquer style. Split into submatrix:

$$M = \begin{pmatrix} A & B \\ C & D \end{pmatrix}, \qquad N = \begin{pmatrix} E & F \\ G & H \end{pmatrix}.$$

```
int Divide = (int)(N/2);

int A11[SIZE][SIZE], A12[SIZE][SIZE], A21[SIZE][SIZE], A22[SIZE][SIZE];

int B11[SIZE][SIZE], B12[SIZE][SIZE], B21[SIZE][SIZE], B22[SIZE][SIZE];
```

```
//dividing the matrices in 4 sub-matrices:
for (i = 0; i < Divide; i++)
{
    for (j = 0; j < Divide; j++)
    {
        All[i][j] = A[i][j];
        Al2[i][j] = A[i] + Divide];
        A2[i][j] = A[i + Divide][j];
        A22[i][j] = B[i][j];
        B11[i][j] = B[i][j];
        B12[i][j] = B[i][j + Divide];
        B21[i][j] = B[i][j + Divide];
        B22[i][j] = B[i + Divide][j];
        B22[i][j] = B[i + Divide][j] + Divide];
}
</pre>
```

Then we calculate the intermediate matrices:

$$S_1 = (B - D)(G + H)$$

$$S_2 = (A + D)(E + H)$$

$$S_3 = (A - C)(E + F)$$

$$S_4 = (A + B)H$$

$$S_5 = A(F - H)$$

$$S_6 = D(G - E)$$

$$S_7 = (C + D)E$$

Let's look at an example of S_2 :

```
MatrixAdd(A11, A22, AResult, Divide); // a11 + a22
MatrixAdd(B11, B22, BResult, Divide); // b11 + b22
StrassenAlgorithm(AResult, BResult, P1, Divide); // p1 = (a11+a22) * (b11+b22)
```

Note that Strassen is recursive:

```
\begin{aligned} & \textbf{Algorithm 3 Strassen's Algorithm} \\ & \textbf{function STRASSEN}(M,N) \\ & \textbf{in furm } M_1N_{11} \\ & \textbf{end if} \\ & \textbf{Let } M = \begin{pmatrix} A & B \\ C & D \end{pmatrix} \text{ and } N = \begin{pmatrix} E & F \\ B \end{pmatrix} \\ & \textbf{Set } S_1 = \textbf{STRASSEN}(B - D, G + H) \\ & \textbf{Set } S_2 = \textbf{STRASSEN}(A + D, E + H) \\ & \textbf{Set } S_3 = \textbf{STRASSEN}(A - C, E + F) \\ & \textbf{Set } S_4 = \textbf{STRASSEN}(A - C, E + F) \\ & \textbf{Set } S_5 = \textbf{STRASSEN}(A - F - H) \\ & \textbf{Set } S_5 = \textbf{STRASSEN}(A - F - H) \\ & \textbf{Set } S_5 = \textbf{STRASSEN}(A - F - H) \\ & \textbf{Set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{Set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{Set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_7 = \textbf{STRASSEN}(C + D, E) \\ & \textbf{set } S_
```

```
MatrixAdd(A11, A22, AResult, Divide); // a11 + a22
MatrixAdd(B11. B22, BResult, Divide); // b11 + b22

StrassenAlgorithm(AResult, BResult, P1, Divide); // p1 = (a11+a22) * (b11+b22)
```

Now we move on Winograd Algorithm for convolution. Recap on the 2-D Winograd with 4×4 input feature K and 3×3 kernel D:

$$D = \begin{bmatrix} d_{00} & d_{01} & d_{02} & d_{03} \\ d_{10} & d_{11} & d_{12} & d_{13} \\ d_{20} & d_{21} & d_{22} & d_{23} \\ d_{30} & d_{31} & d_{32} & d_{33} \end{bmatrix}$$

$$K = \begin{bmatrix} k_{00} & k_{01} & k_{02} \\ k_{10} & k_{11} & k_{12} \\ k_{20} & k_{21} & k_{22} \end{bmatrix}$$

After im2col operation, we can split

$$\begin{bmatrix} d_{00} & d_{01} & d_{02} & d_{10} & d_{11} & d_{12} & d_{20} & d_{21} & d_{22} \\ \frac{d_{01}}{d_{10}} & d_{02} & d_{03} & d_{11} & d_{12} & d_{13} & d_{21} & d_{22} & d_{23} \\ \frac{d_{10}}{d_{11}} & d_{12} & d_{13} & d_{21} & d_{22} & d_{23} & d_{31} & d_{32} \\ d_{11} & d_{12} & d_{13} & d_{21} & d_{22} & d_{23} & d_{31} & d_{32} & d_{33} \end{bmatrix} \begin{bmatrix} \kappa_{00} \\ k_{01} \\ \frac{k_{02}}{k_{10}} \\ k_{11} \\ \frac{k_{12}}{k_{20}} \\ k_{21} \\ k_{22} \end{bmatrix} = \begin{bmatrix} r_{00} \\ r_{01} \\ r_{10} \\ r_{11} \end{bmatrix}$$

$$\begin{aligned} M_0 &= (D_{00} - D_{20}) \overrightarrow{k_0} \\ M_1 &= (D_{10} + D_{20}) \frac{\overrightarrow{k_0} + \overrightarrow{k_1} + \overrightarrow{k_2}}{2} \\ \begin{bmatrix} D_{00} & D_{10} & D_{20} \\ D_{10} & D_{20} & D_{30} \end{bmatrix} \begin{bmatrix} \overrightarrow{k_0} \\ \overrightarrow{k_1} \\ \overrightarrow{k_2} \end{bmatrix} = \begin{bmatrix} \overrightarrow{r_0} \\ \overrightarrow{r_1} \end{bmatrix} = \begin{bmatrix} M_0 + M_1 + M_2 \\ M_1 - M_2 - M_3 \end{bmatrix} \\ M_2 &= (D_{20} - D_{10}) \frac{\overrightarrow{k_0} - \overrightarrow{k_1} + \overrightarrow{k_2}}{2} \\ M_3 &= (D_{10} - D_{30}) \overrightarrow{k_2} \end{aligned}$$

The formuation of this Winograd is:

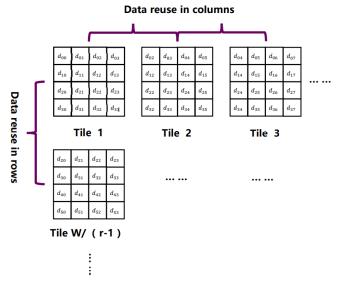

$$Y = A^{T}[[GgG^{T}] \odot [B^{T}dB]]A \tag{1}$$

where the transforms for $F(3 \times 3, 2 \times 2)$ are:

$$B^T = egin{bmatrix} 1 & 0 & -1 & 0 \ 0 & 1 & 1 & 0 \ 0 & -1 & 1 & 0 \ 0 & -1 & 0 & 1 \end{bmatrix}, G = egin{bmatrix} rac{1}{2} & 0 \ rac{1}{2} & -rac{1}{2} \ 0 & 1 \end{bmatrix}$$

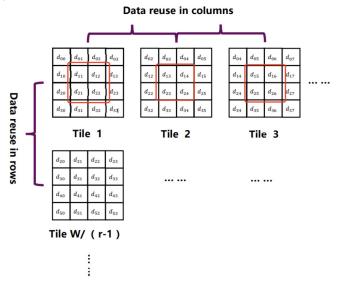

Note that a feature map is usually larger than 4×4 , we can handle it by splitting into 4×4 tiles with overlapping.

The overlapping step is set as 2 for 3×3 kernel size so the output of each tile can merge the original size.

THANK YOU!
